Your Key Benefits

- ✔ Streamlined Sensor Management
- ✔ Cross-Network Notification
- ✔ Detailed Reporting
- ✔ Effortless Sensor Navigation
- ✔ Holistic Notification Management
- ✔ Efficient Fleet Management

Muninn Central

Cover Your Networks in One Place

Take control of your cybersecurity with Muninn Central, the perfect solution for customers and partners seeking to efficiently manage and monitor multiple sensors and networks. Whether you opt for a self-hosted setup or leverage Muninn's cloud-based Central, you gain comprehensive control over your network infrastructure.

Centralized Management, Simplified Security

Manage all your sensors and networks from a single, intuitive interface, regardless of deployment (self-hosted or cloud-based).

Streamline operations with our fleet management for effortless configuration and consistent security protocols across your network infrastructure.

All notifications in one place for easy access and advanced search, empowering you to uncover hidden threats buried in vast datasets.

Enhanced Threat Detection & Visibility

Correlate events across networks and sub-organizations to identify coordinated attacks before they strike, especially valuable for large deployments.

Perform deep-dive searches on sensor data, uncovering hidden connections and suspicious activities beyond individual notifications.

Gain instant network insights with Muninn's built-in reporting tool. Generate clear, visual reports in seconds, keeping everyone informed or efficiently report

Not all Networks Are the Same.

In a time where the number of novel and targeted cyberattacks increases, protection against known and previously encountered cyberthreats is no longer sufficient. Muninn's AI utilizes your network data to defend against both known and emerging new threats.

Contact us today to learn how Muninn Central can elevate your cybersecurity.
